## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards an unobvious improvement in the blower art. Specifically, the instant invention claims a blower having a housing and a discharge tube attached to the housing for guiding a stream of air, wherein the air stream flows in a main direction in the discharge tube and is discharged in a discharge direction that is at a angle greater than 0° with respect to the main stream direction. A partial air stream is adapted to be branched off from the main stream and out of the discharge tube in a partial stream direction that is directed opposite the transverse component of the discharge stream direction.

The concept of a discharge stream direction being at a angle greater than 0° is disclose in such prior art references as U.S. Patent 6,526,624 to Miyamoto, U.S. Patent 4,413,371 to Tuggle et al. and U.S. Patent 6,076,231 to Bucher. Particularly, Bucher discloses a partial air stream that branches off from the main stream. This partial stream, however blow in the same direction as the traverse component of the discharge stream direction. U.S. Patent 5,931,609 does teach having a channel facing opposite the discharge stream direction however this port is used as a relief port for use when the discharge stream is disrupted. Since Bucher's partial discharge is position for the purpose of supplementing the discharge stream, there is no motivation to modify the stream so that it would face the opposite direction that wouldn't result in the destruction of the invention of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
